

RegularExpressionAttribute

```
classDiagram
    class RegularExpressionAttribute
    class AnyTestClientAuthenticationContainsDigitAttribute["AnyTest.ClientAuthentication.ContainsDigitAttribute"]
    AnyTestClientAuthenticationContainsDigitAttribute --|> RegularExpressionAttribute
```

The diagram illustrates an inheritance relationship. At the top is the 'RegularExpressionAttribute' class, represented by a white box with a black border, divided into three horizontal sections. The top section contains the class name, while the other two are empty. Below it is the 'AnyTest.ClientAuthentication.ContainsDigitAttribute' class, represented by a gray box with a black border, also divided into three horizontal sections. The top section contains the class name, the middle section is empty, and the bottom section contains the method signature '+ ContainsDigitAttribute()'. A blue arrow with a hollow triangular head points from the top of the gray box to the bottom of the white box, indicating that the gray class inherits from the white class.

AnyTest.ClientAuthentication.
ContainsDigitAttribute

+ ContainsDigitAttribute()
