

global::XamarinForms
::Platform::Android::
FormsAppCompatActivity

```
classDiagram
    class GlobalXamarinFormsPlatformAndroidFormsAppCompatActivity {
    }
    class AnyTestMobileClientDroidMainActivity {
        + OnRequestPermissionsResult()
        # OnCreate()
    }
    AnyTestMobileClientDroidMainActivity --|> GlobalXamarinFormsPlatformAndroidFormsAppCompatActivity
```

The diagram illustrates an inheritance relationship. The base class, `global::XamarinForms::Platform::Android::FormsAppCompatActivity`, is shown in a white box with three horizontal compartments. The derived class, `AnyTest.MobileClient.Droid.MainActivity`, is shown in a grey box with three horizontal compartments. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance. The derived class's second compartment is empty, and its third compartment contains the method signatures `+ OnRequestPermissionsResult()` and `# OnCreate()`.

AnyTest.MobileClient.Droid.
MainActivity

+ OnRequestPermissionsResult()
OnCreate()
